"It’s not an exaggeration when I say we’re doing a good job. It’s our end users saying it. We became 200 percent more efficient."  
Alex Wallace, Director of IT, Cerita Research, San Antonio, Texas, leading clinical research provider.

"The feature set is second to none and provides many tools that will allow us to save time and dedications to other tasks. Our AD environment consists of about 1,500 users and about 2,500 devices. Ease of management of users alone was the main reason we looked at this product but the ability to manage devices was such a bonus that was sold on this product."
John McKillen, CISO, Information Security Manager, Richmond, Kentucky.

"The clusters we manage are spread across the US, Texas, Michigan, Ohio, Florida. We have 30 large users in the US. So, we are able to use OpManager on the server here on choice and it pulls across the WAN and gives us the information on the connectivity, faults, network services performance etc. OpManager is very competitively priced and value for money."
Crika, Network Support Supervisor, Gallop, Floreat Credit Union Division.

"We managed to save ten thousand of dollars by just fixing from CA’s Wily Intruder. Applications Manager can do everything Wily does, and all with no agents. I use it on the internal network."
Bill Robinson, Hallmark Channel.

What is the ManageEngine 90:10 promise?

It’s nothing short of surprising that ManageEngine software is tailored to separate modules, complex pricing and impossible integrations. We decided to do things differently at ManageEngine. We kept our costs down. We didn’t acquire any products, we built them ourselves. So, that also means we know what it means to integrate. We understand what you are looking for and give you top-quality products.

When large vendors ship products for SMBs, they roll out an expensive edition that has all the key features (timed or not) priced low. But are you getting true value? Another strategy vendors use is bring out low-cost base versions of the products and bundle out every other key feature as a “value-added” add-on. Of course, all these add-ons are going to cost money, a lot of it. Add up all the costs and the user - you lose once again. At ManageEngine, we win when you win.

Founded in 1996, ManageEngine is a reputation of building one of the best software companies in the world. With a global presence in 150 countries and over 200,000 customers, ManageEngine is one of the leading enterprise IT management vendors with more than 10,000 employees and 10 million users around the globe. ManageEngine is also an ISO 27001 certified and a Gartner Magic Quadrant vendor.

So welcome to the 90:10 world of ManageEngine. A world where we are not the most expensive or the cheapest. A world where nobody is the best or the worst. A world where ManageEngine is not a worry anytime.
